

Installation Instructions

Installation

- Install the latest version of Anaconda (**Python version 3.7**, not version 2) on your local machine from <https://www.anaconda.com/download/>

- Also **install the extra packages** for Python by going to **Start → Anaconda3 → Anaconda Prompt** (PC Users) or the terminal (Mac/Linux users) and type:

conda install -c conda-forge cartopy

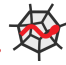

conda install -c conda-forge netcdf4

conda install -c conda-forge pyresample

Check if the build works

1. Test Spyder

- **Launch Spyder**

- *Mac Users:* Open **Anaconda Navigator**  and you will how to launch **Spyder**
- *PC Users:* Go to **Start → Anaconda3 → Spyder** 
- *Linux Users:* Type **spyder** into the terminal

- In the Spyder console, type **import cartopy** and hit **enter**. See below for an example.
 - If no errors print, the package loaded successfully.

```

2. Test Jupyter Notebooks

- **Launch Jupyter Notebooks**
 - *PC Users:* Go to **Start -> Anaconda3 -> Jupyter Notebook**
 - *Mac/Linux Users:* Type **jupyter notebook** into the terminal
- If it succeeds, a browser window will launch and you'll see something like this:
